

An superior ATM anchoring technology

The ATM Raminator is a proven successful theft deterrent that protects ATM assets and money. The Raminator (made up of a steel plinth or mini plinths, dependent upon the nature of the ATM installation) attaches to the ATM and the ground; when an ATM receives the force of a hit or pull, the plinth absorbs a reasonable amount of both kinetic and hydraulic energy and deflects the direct pulling out of the ground bolts.

Repeated hits to the ATM continue to be absorbed as the plinths flex and absorb the shock. The Raminator can be easily incorporated into a new ATM install as well as retrofitted on existing ATMs. Features include easy installation, totally passive protection, no ongoing maintenance, various product models to meet specific system needs and affordable pricing. Product models available to fit most models of ATMs .

Technical Specifications

- ATM Raminator Is an above ground shock absorber which prevents ATM removal.
- The ATM Raminator is a non-electronic, totally passive protection device.
- Expanding steel anchoring device for ATM and other items vulnerable to ram attack.
- Made of steel plates that are attached to the base of the ATM and to the ground
- The device attached to the ATM base and the ground redirects the 'shock energy' by deformed expansion and keeps the ATM fixed to the ground.
- ATM Raminator's energy absorbing V3 coil and Plinth designs absorb tremendous forces upon impact.
- Once an ATM is tipped, repeated ramming results in vehicle climbing the ATM as energy can no longer be directed onto ground fixing bolts.
- Easy to install – models to suit most applications (ATM's, vending machines, night deposits or anything that needs to be anchored.)
- The ATM Raminator can be retrofitted to existing ATMs
- Reusable - recyclable.

How many ATMs can you afford to lose?

Part: 03010-00001
Model: Security
Description: Raminator V3 * Designed to prevent removal by force or ram raid, the Raminator is a non-electronic physical security device that holds when bolts do not. * Free shipping does not apply to Security Products *

Part: 03010-00002
Model: Security
Description: Raminator V3-Universal * Designed to prevent removal by force or ram raid, the Raminator is a non-electronic physical security device that holds when bolts do not. * Free shipping does not apply to Security Products *

Part: 03010-00003
Model: Security
Description: Raminator V3 Cover (Either Model) * Free shipping does not apply to Security Products *
