

ATM Parts a Key Component to Service after the Sale

Supporting ATM's in the field successfully requires an organization that can provide you with a comprehensive solution for all aspects of your business. Pre-sale, documentation, technical assistance and service after the sale all combine to provide a distributor and end-user peace-of-mind once an ATM has been deployed into the field. One key component in this service after the sale model is ATM parts. Without a doubt, having access to the correct ATM parts and working with an organization that understands the complexities of supporting a multitude of brands and models like Triton, Tranax and Nautilus-Hyosung ATM parts in the field is a key component for any ATM distributor or ISO. Understanding inventory requirements, having key relationships with ATM manufacturers and ATM parts organizations, making it easy for a customer to determine the correct application and ATM part number(s), providing a competitive pricing program, keeping updated with all software and firmware-related enhancements, providing a complete warranty program, having an easy return authorization program, and having the personnel that can provide clear and concise ATM solutions, are all components needed to provide a successful ATM Parts business.

As ATM's proceed through their lifecycles, there will be a need for the correct ATM parts to support these machines in the field. Be it a failed component due to wear, misuse or environment; a legislative-mandated upgrade (PCI, EMV, etc.); or a cosmetic enhancement (new signs or plastics seen by the consumer), having an organization that can provide and support your ATM parts needs is critical in keeping any deployed ATM operational. Finding an organization that can do this with multiple ATM branded parts is even better. At ATMGurus, you will find the largest selection of multi-brand ATM parts available for retail ATM's. Triton, Tranax and Nautilus-Hyosung ATM parts are available for purchase now, with other brands to follow. The 25000 square foot facility houses a \$10M inventory of over 3500 different part varieties. No matter what your ATM parts needs, you can find it at ATMGurus.

ATMGurus is dedicated to providing guaranteed repair on all entry-level retail ATM's, including Triton ATMs, Tranax ATMs and Nautilus Hyosung ATMs.

ATMGURUS for Parts
